

**New Solution**

# VoiceConnect 100

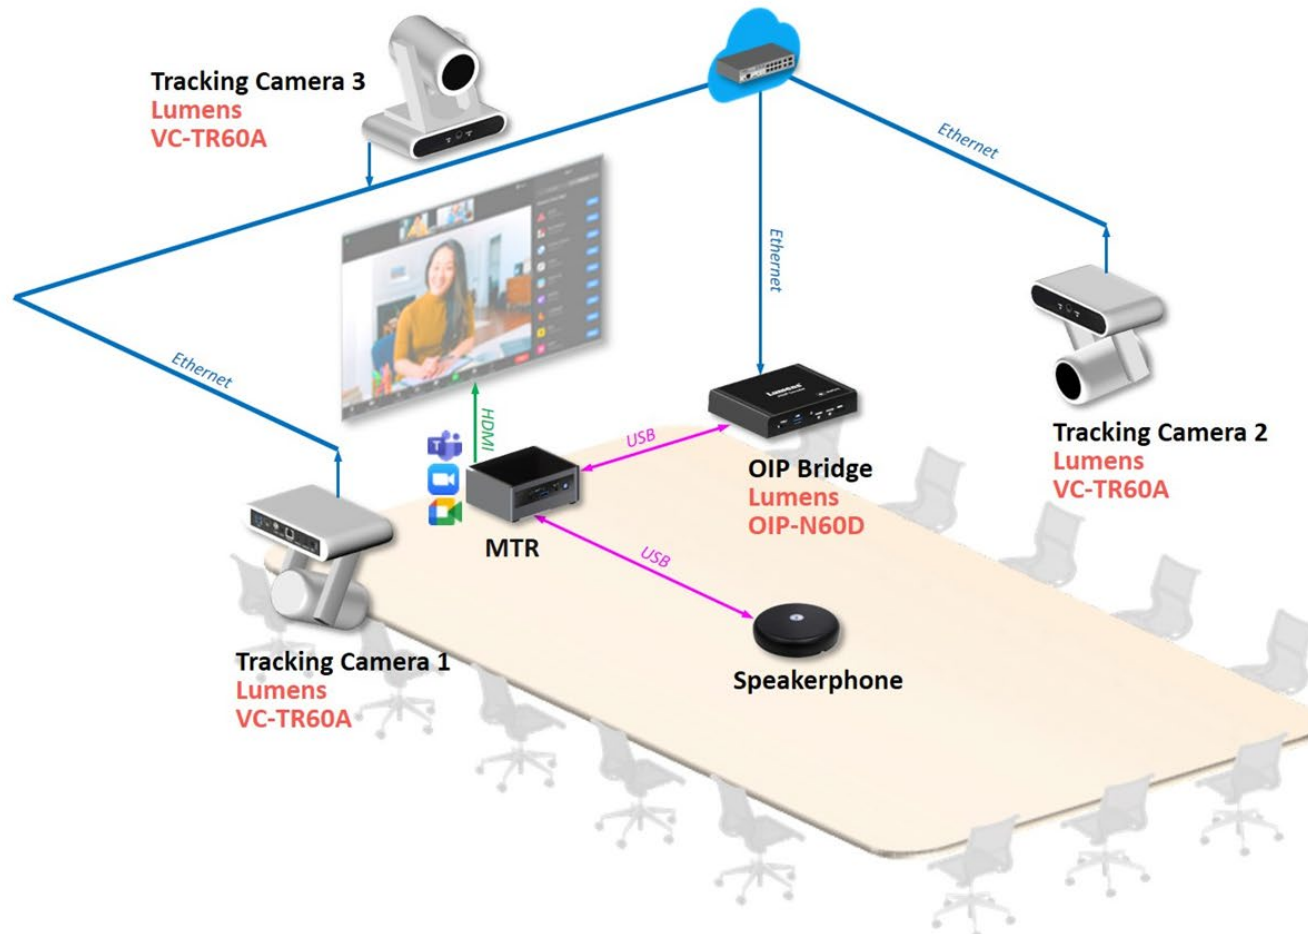

## Voice-Activated Multi-Camera Tracking and Auto-Switching

VoiceConnect 100 is a BYOM-ready voice-tracking system. The solution combines multiple **VC-TR60A cameras** with the **OIP-N60D decoder** and is designed for installation on a LAN. It provides meeting rooms with a cost-effective, powerful and automated video experience.

VoiceConnect allows participants to speak naturally while the system selects the best camera angle in real-time. By keeping remote attendees focused on the person speaking, VoiceConnect 100 creates an immersive and professional communication experience for hybrid meetings, training sessions and round-table discussions.
