Lumens Launches the New PS753 4K Desktop Document Camera

4K UltraHD Document Camera for Large Documents, X-rays, Celluloid Film, and 3D Objects

Hsinchu, Taiwan, December 8, 2021 – Lumens® Digital Optics Inc. introduces the PS753 4K desktop document camera. This document camera delivers live images of print documents, 3D objects, celluloid film, and X-rays. The PS753 reproduces remarkably detailed images for display images in superior image quality on screens and projectors. It is also designed to stream video images over networks and video conferencing platforms.

Featuring a professional Sony 4K image sensor and 300x total zoom, the PS753 captures objects and reproduces documents larger than A3 size. Lumens PS753 has dual lights on adjustable gooseneck mounts and a backlit LED light under the display area, ensuring objects are perfectly lit from every angle.

“As a 4K visualizer, Lumens PS753 is a step above in terms of resolution. It also stands apart with an extensive range of features, including IP streaming, integration with video conferencing platforms, and instant reproduction of X-rays and celluloid film. This unit is ideal for environments such as higher education, medical training, and conferences, where picture quality and collaboration with colleagues are vital.” commented Steven Liang, VP of Product Development for Lumens.

The PS753 outputs live images over a connection that suits the way users work: it links directly to a display or projector over HDMI, VGA, or streams images over Ethernet networks. The onboard annotation tools allow lecturers to draw over the image on screen with live capture and presentation without the need for a host PC. For advanced control, Lumens Ladibug™ software is included to optimize video quality, manage streaming output, and share files with students, colleagues, and collaborators.

Availability

The PS753 4K desktop document camera is available now.
